Problem Statement

In today's dynamic environment, with growing working hours and fewer classroom time, teachers need additional resources to help them handle important class time effectively. Their focus is not only demanded by teaching, but faculty members are often stuck with formal duties, e.g. taking student attendance. If undertaking this task isn't just bad, imagine their plight in attempting to manage it. That's exactly where we step in. Let's agree on one thing, the teachers still do some of the initial work in this process, but soon, we'll take over. Give us an excel sheet with the names, roll numbers and the tracked attendance of the students and we will give you the desired, filtered and "hand-picked" output, quickly and efficiently. Timely, spatially, and mathematically efficient, this project can hands-down help reduce a tired and a hard-working teacher's time, energy and money too (in case they decide to opt another expensive attendance tracker over this beauty we've got here). So, this was a short heads-up on what we're going to see here, a simple yet an efficient Student Attendance Tracker.

Class Diagram

where,

In the package “Rohith”, we find the classes:

- Calculate
- Search
- File
- Table

and the

- Main

As we can see, neither are any interfaces implemented nor are any classes inherited.

This is a simple Attendance Tracker with an even simpler and straight-forward code.

Features Available

The User is first greeted with the menu-driven program that gives them the choice to choose one among the 8 offered services which are as follows:

- To View the Student Details by Name:

Here the User is required to enter the Student's Name and with that, they're presented with a table which has the Name, Roll Number and Courses with their corresponding Attendance for that month.

- To View the Student Details by Roll Number:

Here the User is required to enter the Student's Roll Number and with that, they're presented with a table which has the Name, Roll Number and Courses with their corresponding Attendance for that month.

- To View the Attendance from a Course's POV:

Here the User is required to enter the Course Name and with that, they're presented with the table of Students Present or Absent in that course or have an Excused Absence or Unexcused Absence for that Course in that month.

- To View the Attendance of a Student in a Course:

Here the User is required to enter the Course Name along with the desired Student's Name and with that, they're presented with the table of the Student's Attendance Details for that Course in that month.

- To View the Attendance % of a Student in all the Courses:

Here the User is required to enter the Student's Name and with that, they're presented with a simple statistic which has the Name of the Student and the Courses with their corresponding Attendance % for that month.

- To View the Attendance % of a Student in all the Courses (Roll Number):

Here the User is required to enter the Student's Roll Number and with that, they're presented again with the statistic which has the Name and Roll Number of the Student and the Courses with their corresponding Attendance % for that month. This method can be useful as the Roll Numbers are unique and cannot be confused with others, contrary to the case with Names.

- To View the Attendance % of the class from a Course's POV:

Here the User is required to enter the Course Name and with that, they're presented with the average percentage of students attending the Course in that month.

- To View the list of Attendance Defaulters:

Here the User is required to enter the Course Name and their desired percentage below which a Student is considered to be a defaulter of Attendance. They're then presented with the list of Students with their Roll Number, Name and their percentage of attendance in that Course.

Methods behind this Tracker:

- `public void prsntByName(String name);`
- `public void prsntByID(String id);`
- `public void prsntBySubject(String subject);`
- `public void isBelow(double attendance,String subject)`
- `public void byName(String name);`
- `public void byId(String id);`
- `public void bySubject(String subject);`
- `public void bySubject(String subject, String name);`
- `public void read(String id);`
- `public static void home_menu();`
- `Table(String[][] data, String[] column);`
- `Table(String[][] data, String[] column, String name);`

Challenges Faced

These were some of the challenges we faced while starting this project, which we later overcame:

- The data being in large collections, going through them and printing them in an user-friendly way was challenging.
- There wasn't enough work that could be distributed among six people, considering our knowledge on the new concept of JAVA-SWING and the simplicity of this project.
- JAVA-SWING, having a steep learning curve, gave us a tough time when we had to incorporate it into the code.
- There were difficulties initially on converting an ArrayList to a Two-Dimensional Array.
- There were a few issues that popped-up when we tried importing the .csv file to use in our project.

Credits

- Rohith Prabakar:

Organized the final code and coded the classes *File* and *Table*.

- Sutharsanan S R: class *Search*

Coded the methods `bySubject(String subject);` and `bySubject(String subject, String name);`

- R M Venkatram: class *Search*

Coded the methods `byName(String name);` and `byId(String id);`

- T S Swaminathan: class *Calculate*

Coded the methods `prsntByName(String name);` and `prsntById(String id);`

- Sanjai K: class *Calculate*

Coded the methods `prsntBySubject(String subject);` and `isBelow(double attendance,String subject);`

- Priyavarman R: class *Main*

Coded the method `home_menu();`

Annexure I

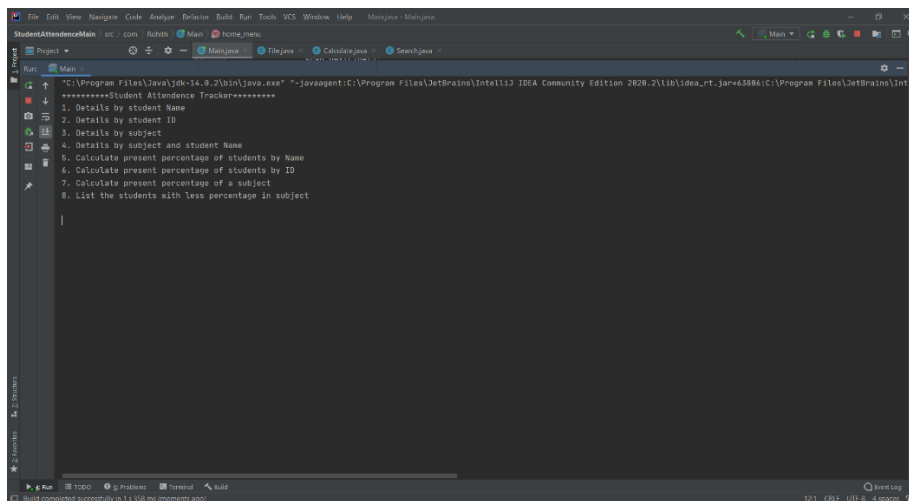

Code:

<https://github.com/RohithPrabakar/StudentAttendance>

Annexure II

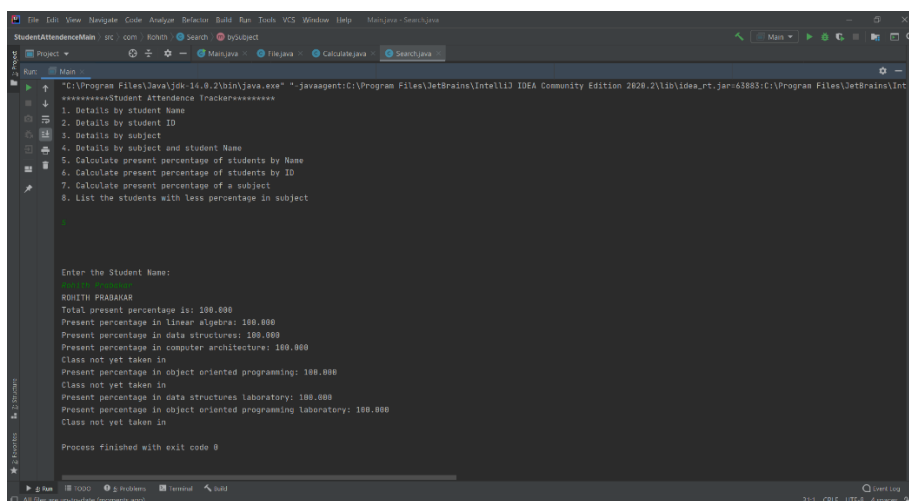

Output Snapshots:

- Home Screen:

```
StudentAttendanceMain
src
com
Rohith
Main
Home_menu
Project
Main
1. Details by student Name
2. Details by student ID
3. Details by subject
4. Details by subject and student Name
5. Calculate present percentage of students by Name
6. Calculate present percentage of students by ID
7. Calculate present percentage of a subject
8. List the students with less percentage in subject
```

- When the Option-5 is chosen:

```
StudentAttendanceMain
src
com
Rohith
Search
bySubject
Project
Main
1. Details by student Name
2. Details by student ID
3. Details by subject
4. Details by subject and student Name
5. Calculate present percentage of students by Name
6. Calculate present percentage of students by ID
7. Calculate present percentage of a subject
8. List the students with less percentage in subject

Enter the Student Name:
ROHITH PRABAKAR
Total present percentage is: 100.000
Present percentage in Linear algebra: 100.000
Present percentage in Data structures: 100.000
Present percentage in Computer architecture: 100.000
Class not yet taken in
Present percentage in Object oriented programming: 100.000
Class not yet taken in
Present percentage in Data structures laboratory: 100.000
Present percentage in Object oriented programming laboratory: 100.000
Class not yet taken in
Process finished with exit code 0
```

- When the Option-6 is chosen:

```

C:\Program Files\Java\jdk-14.0.2\bin\java.exe" --javaagent:C:\Program Files\JetBrains\IntelliJ IDEA Community Edition 2020.2\lib\idea_rt.jar=63888:C:\Program Files\JetBrains\Int
*****Student Attendance Tracker*****
1. Details by student Name
2. Details by student ID
3. Details by subject
4. Details by subject and student Name
5. Calculate present percentage of students by Name
6. Calculate present percentage of students by ID
7. Calculate present percentage of a subject
8. List the students with less percentage in subject

Enter the Student ID:
192348 VEMKAT RAM
Total present percentage is: 96.226
Present percentage in linear algebra: 180.888
Present percentage in data structures: 168.888
Present percentage in computer architecture: 75.888
Class not yet taken in
Present percentage in object oriented programming: 188.888
Class not yet taken in
Present percentage in data structures laboratory: 188.888
Present percentage in object oriented programming laboratory: 188.888
Class not yet taken in
Process finished with exit code 0
  
```

- When the Option-7 is chosen:

```

C:\Program Files\Java\jdk-14.0.2\bin\java.exe" --javaagent:C:\Program Files\JetBrains\IntelliJ IDEA Community Edition 2020.2\lib\idea_rt.jar=49887:C:\Program Files\JetBrains\Int
*****Student Attendance Tracker*****
1. Details by student Name
2. Details by student ID
3. Details by subject
4. Details by subject and student Name
5. Calculate present percentage of students by Name
6. Calculate present percentage of students by ID
7. Calculate present percentage of a subject
8. List the students with less percentage in subject

Enter the Subject:
object oriented programming
92.47% of students have attended object oriented programming
Process finished with exit code 0
  
```

- When the Option-8 is chosen:

```

C:\Program Files\Java\jdk-14.0.2\bin\java.exe" --javaagent:C:\Program Files\JetBrains\IntelliJ IDEA Community Edition 2020.2\lib\idea_rt.jar=63877:C:\Program Files\JetBrains\Int
*****Student Attendance Tracker*****
1. Details by student Name
2. Details by student ID
3. Details by subject
4. Details by subject and student Name
5. Calculate present percentage of students by Name
6. Calculate present percentage of students by ID
7. Calculate present percentage of a subject
8. List the students with less percentage in subject

Enter the Subject:
linear algebra
Enter the attendance percentage to show below:
192348 VEMKAT RAM ,61.888% in linear algebra
192348 VEMKAT RAM ,61.888% in linear algebra
Process finished with exit code 0
  
```
